WHAT IS CLAIMED IS:

- 1. A system for displaying a three-dimensional image of an organ or structure inside the body, the system comprising:
- a processor configured to be communicatively coupled to a probe, the
- 4 probe being configured to be located in or adjacent to the organ or structure inside the
- 5 body;
- 6 memory coupled to the processor and configured to store image data
- 7 pertaining to the organ or structure inside the body; and
- a three-dimensional display coupled to the processor and configured to
- 9 simultaneously display the three-dimensional image and a representation of the probe.
- The system of claim 1, wherein the representation of the probe is
- 2 registered with the three dimensional image of the organ or structure inside the body.
- The system of claim 1, wherein the representation of the probe is
- registered with the three dimensional image of the organ or structure inside the body
- 3 using a localization system.
- 1 4. The system of claim 1, wherein the organ or structure inside the body
- 2 is a heart.
- The system of claim 1, wherein the probe is a catheter.
- 1 6. The system of claim 1, wherein the system is an electrophysiology
- 2 system.
- The system of claim 1, wherein the image data is acquired prior to the
- 2 probe being positioned inside the body.
- The system of claim 1, wherein the image data is acquired during the
- 2 image-guided intervention procedure using an internal medical imaging device.

- 9. The system of claim 1, wherein the system is further configured to 1 display a map of the electrical properties of the organ or structure inside the body. 2
- 10. The system of claim 1, wherein the system is further configured to 1 display historical data related to the organ or structure inside the body. 2
- 11. The system of claim 1, wherein the system is further configured to 1 display auxiliary data related to an image-guided interventional procedure. 2
- 12. The system of claim 1, wherein the display is further configured to 1 display visual navigational information related to an image-guided intervention 2 procedure. 3
- 13. The system of claim 1, wherein the three-dimensional display is a 1 spatial three-dimensional display. 2
- 14. A system for displaying a three-dimensional image of a heart, the 1 system comprising: 2
- a processor configured to be communicatively coupled to a probe; 3 memory coupled to the processor and configured to store image data 4 pertaining to the heart; and
- a three-dimensional display coupled to the processor and configured to 6 simultaneously display the three-dimensional image of the heart and a representation 7 of the probe. 8
- 15. The system of claim 14, wherein the representation of the probe is 1 registered with the three dimensional image of the heart. 2
- 16. 1 The system of claim 14, wherein the representation of the probe is registered with the three dimensional image of the heart using a localization system. 2
- 17. The system of claim 14, wherein the system is an electrophysiology 1 monitoring system.

5

- 18. The system of claim 14, wherein the probe is a catheter configured to collect data representative of the electrical properties of the heart.
- 1 19. The system of claim 14, wherein the system is further configured to display a map of the electrical properties of the heart.
- 1 20. The system of claim 14, wherein the three-dimensional display is a spatial three-dimensional display.
- 1 21. A system for displaying a three-dimensional image of an organ or 2 structure inside the body, the system comprising:
- a processor configured to be communicatively coupled to a probe, the
- 4 probe being configured to be located in or adjacent to the organ or structure inside the
- body and to collect data representative of the electrical properties of the organ or
- 6 structure inside the body;
- 7 memory coupled to the processor and configured to store image data
- 8 pertaining to the organ or structure inside the body; and
- a three-dimensional display coupled to the processor and configured to
- display the three-dimensional image and a map of the electrical properties of the
- organ or structure inside the body.
- 1 22. The system of claim 21, wherein the display is further configured to
- 2 simultaneously display a representation of the probe, wherein the representation of the
- 3 probe is registered with the three dimensional image of the organ or structure inside
- 4 the body.
- 1 23. A method of displaying a three-dimensional image of an organ or
- 2 structure inside the body, the method comprising:
- acquiring a three-dimensional image of the organ or structure inside
- 4 the body;
- 5 registering a representation of a probe with the three-dimensional
- 6 image, the probe being located in or adjacent to the organ or structure inside the body;
- 7 and

- simultaneously displaying a representation of the probe with the threedimensional image using a three-dimensional display.
- 1 24. The method of claim 23, further comprising displaying a map of the electrical properties of the organ or structure inside the body.
- 1 25. The method of claim 23, wherein the organ or structure inside the body 2 is a heart.
- 1 26. The method of claim 23, wherein the probe is a catheter.
- 1 27. The method of claim 23, further comprising displaying visual 2 navigational information with the three-dimensional image and the representation of 3 the probe.
- 1 28. The method of claim 27, wherein the visual navigational information 2 includes changes in color indicate a proximity of the probe to a location or area of the 3 three-dimensional image.
- 1 29. A system for displaying a three-dimensional image of an organ or 2 structure inside the body, the system comprising:
- memory configured to store a first set of image data pertaining to the organ or structure inside the body;
- a processor coupled to the memory and configured to be
- 6 communicatively coupled to an imaging device and a probe, the imaging device being
- 7 configured to generate a second set of image data pertaining to the organ or structure
- 8 inside the body, and the probe being configured to be located in or adjacent to the
- 9 organ or structure inside the body, the processor further configured to generate the
- three-dimensional image using the first set of image data and the second set of image
- 11 data; and
- a three-dimensional display coupled to the processor and configured to
- simultaneously display the three-dimensional image and a representation of the probe.

- 1 30. The system of claim 29, wherein the system is configured to provide a warning related to an image-guided interventional procedure.
- 1 31. The system of claim 29, wherein the system is configured to provide a 2 warning when the first set of image data differs from the second set of image data 3 according to a predetermined criterion.
- The system of claim 29, wherein the system is configured to determine a first estimate of the location of the probe and a second estimate of the location of the probe and to provide a warning when the first estimate differs from the second
- 4 estimate according to a predetermined criterion.
